

O&O DiskImage 15 Professional Edition

Maximum data security!

Backing up data on a regular basis is still something that many users prefer to avoid. Previously, you always needed two different storage media: a USB stick or similar to create the O&O DiskImage boot media, which allows you to restore a system partition, and a USB hard drive for backing up your computer. From now on, one storage medium is enough! Simple, fast and without any searching: you are always ready to restore your system!

DiskImage To Go

Previously, in addition to regularly backing up your machine, you also had to separately create an O&O DiskImage boot media to restore that backup. Everything is easier now! The new DiskImage To Go function automatically turns an external hard drive (or USB flash drive with enough storage space) into an O&O DiskImage boot medium, and marks this disk as the preferred storage medium for future system backups. As soon as you connect this external USB hard disk to your computer, O&O DiskImage automatically creates a backup. This makes it easy to create a recent backup. And if something really happens to your computer or you want to transfer your system and all your data to a new computer, then with the O&O DiskImage boot medium you can restore the backup stored on it with just one touch of a button. Without the hassle of searching for the boot medium and the external hard drive with the backup. It has never been so easy to ensure the security of your data!

Image entire PCs, individual drives or files

The most reliable way to protect yourself against data loss is if you make regular backups of your data and the operating system and store it on an external storage medium. When backing up your PC, O&O DiskImage saves both personal files as well as drive information and individual settings. This not only protects irreplaceable files, such as family photos, vacation videos and office documents, but you also save yourself in the event of a crash the lengthy set up and reinstall of all the programs and the Windows operating system.

Regular images are a must

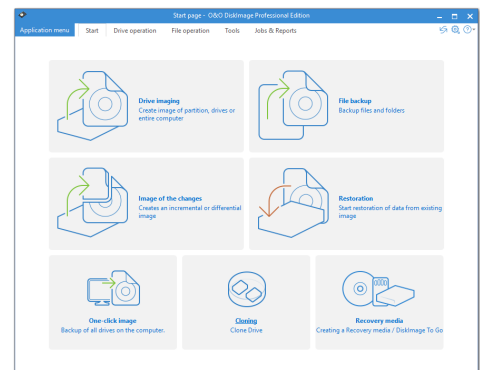

To make sure your backups are always up to date, we recommend that you perform regular backups at short intervals. You can automate this with O&O DiskImage, so that your data is backed up say once a week, for example, automatically and in the background.

Machine independent restoration

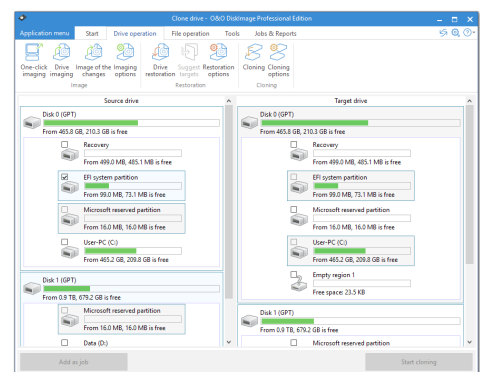

The M.I.R. (Machine Independent Restoration) feature allows you to also restore or duplicate an entire PC or system partition on a computer whose hardware is different from the original machine, for instance, where you have changed hardware components on the target machine, or have bought a brand new PC and want to restore an old image onto it.

Create a boot medium directly from within the program

O&O DiskImage can bring a system back to life immediately and with no installation required. It does so by way of a Boot Medium (USB Stick or CD/DVD) which is based on the currently installed Windows system and which contains all the standard drivers required.

Tools

Plug-and-play function

Thanks to the integrated plug-and-play option, selected files and folders can be backed up automatically as soon as, for example, an external hard disk is connected to the computer. This is ideal for users who forget to carry out regular backups or who don't want to go through the trouble. Once configured, the auto backup function runs by itself.

Features

- ♥ DiskImage To Go - Create a boot medium with image included
- ♥ Support for VHDX (Virtual Hard Disk Format)
- ♥ Command line function
- ♥ Live Update function
- ♥ File-based backup: image files up to 5 times quicker
- ♥ Trigger multiple tasks with portable devices (plug and play)
- ♥ Driver integration when creating a boot medium
- ♥ Driver integration when using a boot medium
- ♥ Direct creation of VHDs
- ♥ Simplified wizard for creating and modifying jobs
- ♥ Creating jobs with the Windows Task Scheduler
- ♥ Image an entire computer with the push of a button
- ♥ Image system and data drives
- ♥ Clone drives and entire disks
- ♥ Image only used sectors
- ♥ Incremental/differential images: backup only the changes
- ♥ Save images to network drives
- ♥ Time Schedule for automatic, regular images
- ♥ Advanced burning on CD/DVD/Blu-ray
- ♥ Supports EFI/UEFI systems as well as BIOS
- ♥ Supported File Systems: NTFS/FAT32/FAT
- ♥ Easily restore files, folders, drives and disks
- ♥ Restoring onto different hardware (M.I.R.)
- ♥ Boot media contains extra system rescue tools
- ♥ Direct restoration from virtual disks (VHD)
- ♥ Start a job by connecting a device
- ♥ Create a boot CD from the program itself
- ♥ Even simpler and quicker user interface
- ♥ High-performance compression and encryption of images
- ♥ Support for dynamic and GPT volumes
- ♥ Exclude certain files and/or file types
- ♥ Advanced report management and e-mail notifications

Made in Germany. Made in Berlin.

All O&O products are developed and serviced in Berlin. We at O&O are proud of our German heritage, and proud to represent the quality, security and satisfaction long associated with products "Made in Germany". We take the concerns of our customers very seriously because we know just how important their data is for them. For further information, please visit our website: www.oo-software.com

System Requirements

- ♥ Windows® 10, 8 and 7 (all Editions)
- ♥ An internet connection is required to download the latest program components and to create a boot medium
